BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 10, 7 Sequence 10, 7 Sequence 3, At Sequence 1, At Sequence 1, At Sequence 1, At Sequence 2, At Sequence 6, At Sequen

PHOSPHODIESTERASE CATALYZES THE SPECIFIC HYDROLYSIS OF CGMP TO 5'-ঘ

-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.
-!- COFACTOR: REQUIRES DIVALENT CATIONS. INC IONS ARE REQUIRED FOR MAXIMUM ACTIVITY. MANGANESE, MAGNESIUM AND COBALT ALSO SUPPORT CATALYSIS BUT AT WUCH HIGHER CONCENTRATIONS (BY SIMILARITY).
-!- PATHWAY: CYCLIC INCLEOLIGE metabolism.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS: PDE5A1 AND PDE5A2 (SHOWN HERE);
ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- DATALYSIS BUT AT MATAL SITES AND AN N-TERMINAL REGULATORY DOMAIN: COMPOSED OF A C-TERMINAL CAPALYTIC DOMAIN COMPOSED OF A C-TERMINAL CAPALYTIC DOMAIN COMPOSED OF A G-TERMINAL REGULATORY DOMAIN WHICH CONTAINS TWO HOMOLOGOUS ALLOSTERIC CGMP-BINDING REGIONS, A

AND B.

PTM: PHOSPHORYLATION IS REGULATED BY BINDING OF CGMP TO THE TWO ALLOSTERIC SITES (BY SIMILARITY).
SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE +

FAMILY '.

CGMP-specific 3',5'-cyclic phosphodiesterase (EC 3.1.4.17) (CGB-PDE)
PDE5A OR PDE5.

    Biol. Chem. 273:26982-26990(1998).
    FUNCTION: PLAYS A ROLE IN SIGNAL TRANSDUCTION BY REGULATING THE
INTRACELLULAR CONCENTRATION OF CYCLIC NUCLEOTIDES. THIS
PHOSPHODIESTERASE CATALYZES THE SPECIFIC HYDROLYSIS OF CGMP TO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.
COFACTOR: REQUIRES DIVALENT CATIONS. ZINC IONS ARE REQUIRED FOR

"Molecular cloning and expression of human cGMP-binding cGMP-specific phosphodiesterase.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LESSER EXTENT, IN BRAIN, LIVER AND LUNG.
DOMAIN: CORPOSED OF A C-TERMINAL CATALYTIC DOMAIN CONTAINING TWO PUTATIVE DIVALENT METAL SITES AND AN N-TERMINAL REGULATORY DOMAIN WHICH CONTAINS TWO HOWOLOGOUS ALLOSTERIC COMP-BINDING REGIONS, A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.

GORACDA: REQUIRES DIVALENT CATIONS: ZINC IONS ARE REQUIRED FOR MAXIMUM ACTIVITY. MANGANESE, MAGNESIUM AND COBALT ALSO SUPPORT CATALYSIS BUT AT MOCH HIGHER CONCEMPRATONS (BY SIMILARITY).

ENZYME REGULATION: SILDENAFIL (VIAGRA) IS A HIGHLY SELECTIVE AND POTBNT INHIBATOR OF PDESA AND IS EFFECTIVE IN THE TREATMENT OF PENILE ERECTILE DYSFUNCTION. ALSO INHIBITED BY ZAPRINAST.

PATHWAY: CYCLIC nUCLEOCLIGE metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (JUN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PLAYS A ROLE IN SIGNAL TRANSDUCTION BY REGULATING THE INTRACELLULAR CONCENTRATION OF CYCLIC NUCLEOTIDES. THIS PHOSPHODIESTERASE CATALYZES THE SPECIFIC HYDROLYSIS OF GGMP TO 5'

"Molecular characterization of the alpha'-subunit of cone
photoreceptor cGMP phosphodiesterase in normal and rd chicken.";
Exp. Eye Res. 59:356:372(1994).
-:- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 =
quanosine 5'-phosphate.
-:- SUBUNIT: COMPOSED OF TWO ALPHA' SUBUNITS THAT ARE ASSOCIATED
WITH 3 SMALLER PROTEINS OF 11, 13, AND 15 kDa.
-:- SIMILARIY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
FAMILY.

Natl. Acad. Sci. U.S.A. 87:288-292(1990).
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.
-!- SUBUNIT: COMPOSED OF TWO ALPHA' SUBUNITS THAT ARE ASSOCIATED WITH 3 SMALLER PROTEINS OF 11, 13, AND 15 kDa.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         conserved in

SUBUNIT: OLIGOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND BETA), AN INHIBITONY CHAIN (GAMMA) AND THE DELTA CHAIN.
SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                         FEBS Lett. 223:169-173(1987).
-!- FUNCTION: THIS PROTEIN PARTICIPATES IN PROCESSES OF TRANSMISSION AND AMPLIFICATION OF THE VISUAL SIGNAL.
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0

-!- CATALYTIC ACTIVITY: Guanosine 3",5'-cyclic phosphate + H(2)0 = guanosine 5'-phosphate.

-!- SUBUNIT: OLIGOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND BETA), AN INHIBITORY CHAIN (GAMMA) AND THE DELTA CHAIN.

-!- DISEASE: DEFECTS IN PDE6A ARE A CAUSE OF AUTOSOMAL DOMINANT RETINITS PIGMENTOSA (ADRP) OR AUTOSOMAL RECESSIVE RP (ARRP).

PATIENTS TYPICALLY HAVE NIGHT VISION BLINDNESS AND LOSS OF MIDPERIPHERAL VISIONAL FIELD AND EVENTUALLY CENTRAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens (Human).

                                                                                splicing of the beta-subunit gene.";
FEBS Lett. 278:107-114(1991).
-!- FUNCTION: THIS PROTEIN PARTICIPATES IN PROCESSES OF
TRANSMISSION AND AMPLIFICATION OF THE VISUAL SIGNAL.
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 =
guanosine 5'-phosphate.
-!- SUBUNIT: OLIGOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND
BETA), AN INHIBITORY CHAIN (GAMMA) AND THE DELTA CHAIN.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

STRAIN-Beagle X BITISTSUE-RETINE;
STRAIN-Beagle X BITISTSUE-RETINE;
STRAIN-BEAGLE X BITISTSUE-RETINE;
Submitted (MAY-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS PROTEIN PARTICIPATES IN PROCESSES OF
TRANSMISSION AND AMPLIFICATION OF THE VISUAL SIGNAL.
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 =
-!- CATALYTIC ACTIVITY: Guanosine 3',5'-cyclic phosphate + H(2)0 =
-!- SUBUNIT: OLIGOMER COMPOSED OF TWO CATALYTIC CHAINS (ALPHA AND
BETA), AN INHIBITORY CHAIN (GAMMA) AND THE DELTA CHAIN.
-!- SIMILARITY: BELONGS TO THE CYCLIC NUCLEOTIDE PHOSPHODIESTERASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                /note="Organ: Left Public Bone; Vector: pT713-Pac
(Pharmacia) with a modified polylinker; Site_1: Ecor I;
Site_2: Not I: NoT_CGAP_EDI is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line CSS. The library was constructed according to Bonal
o' Lennon and Soares, Genome Research, 6:91-806, 1996.
First strand cDNA synthesis was primed with an oligo-
ptimer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
cloned directionally into pT772-per vector. The
oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is GCTCAAGGCT.
